

RISK DISCLOSURE STATEMENT

1. Risk Alerts

Foreign exchange and CFD trading is risky and therefore not suitable for every investor. Before you decide to buy or sell the products offered by WISUNOFOX, you should carefully consider several aspects, such as your investment goals, financial situation, and some advice sought through an independent financial advisor. If you think you can't afford to lose money, don't rush into investing.

The purpose of this Risk Disclosure Statement is to provide you with information to help you understand the nature and risks of CFD trading and spread trading. You may make such transactions through the services we provide to you. It is essential for you to read and understand this Risk Warning Statement. This Risk Disclosure Statement does not explain all the risks involved in our CFDs and spread trades, nor does it explain the relationship between such risks and your personal circumstances. It is of the utmost importance that you take enough time to read all the information we provide you before trading CFDs or spreads. Our products can pose a high risk to your funds, especially in a volatile market environment, where prices can quickly go against you. When trading CFDs and spreads, you may lose more than your investment and may need further funds. You should not engage in any such trading activities unless you are fully aware of the risks involved in each financial instrument. If you are still unaware of these risks after consulting your independent financial advisor, you should avoid trading such activities altogether.

2. METATRADER 4

WISUNOFOX's trading platform MetaTrader 4 allows up to 50 million trades per transaction. Traders can trade on an incremental scale (multiple orders of \$50 million for the same currency pair). There may be quote differences between servers, however these differences do not affect the price of execution (but the price used to trigger the pending order).

3. Margin requirements

Margin is the amount of money you need to open a position and is defined by the margin rate. Margin trading is a high-risk trading strategy where you can trade with a margin, but it is not the capital or "margin" provided to you by WISUNOFOX. Alternatively, the margin can also be referred to as "leveraged" or "leveraged trading", meaning that you can trade a larger amount than the relatively small amount of money you have deposited as a margin. You are involved in trading CFDs or Forex and you need to use a certain amount of money as a margin. With margin trading, you get a sizable return if the price is good for you. However, if the price is not in your favor, even if the price changes very little for you, trading can cause you significant losses. You may lose your initial capital contribution and you will be asked to add additional security funds to maintain your position. If you fail to meet the security funding requirements, your position will be forced to close, and the resulting loss will be borne by you. Normally, an auto close is triggered when the initial margin in your account reaches a loss of 30%, and one or more of your positions are required to be closed. However, under severe market pressure, your margin may not be closed, which could result in a 100% maximum loss on your deposit. Therefore, we

recommend that you use risk mitigation strategies such as “Stop Loss” or “Limit Price” orders to limit potential losses when leveraging. Where you cannot guarantee a stop or limit order, market price differences may result in your stop order being executed at an unfavorable price.

4. Slippage

WISUNOFX is committed to providing traders with the best execution of their trades and strives to trade all orders at the required price. Nevertheless, orders may still be subject to slippage based on market volatility or increased trading volumes. The period of slippage most often occurs at the time of the news release, when the market fluctuates significantly or when liquidity is limited.

5. Fees and commissions

Before you start trading, you should be aware of all commissions and other fees that you will incur. All costs and expenses have been disclosed to you separately. When these changes are not expressed in monetary terms, you should understand the monetary value of these costs and expenses. You may be subject to taxation due to changes in laws, regulations and personal circumstances when executing transactions in any financial instrument such as derivatives. In addition, you are responsible for any taxes that arise from the transaction. WISUNOFX cannot ensure that you do not have to pay taxes and other stamp duties.

6. Market Analysis

Any information on the website, such as news, opinions, research and prices, is only used to provide some insight into the current market and is not investment advice. WISUNOFX has the right to indemnify itself against any direct or indirect damages, including (but not limited to) loss of profits, resulting from such information.

7. Abnormal market conditions

You should be aware that under abnormal market conditions, the execution of your orders and requests may be delayed.

8. Software Risk

You are responsible for any software risk issues that arise in the course of the transaction, such as system failures such as information, communications, electronics, etc., which may cause the price to change between the placement of the order and the receipt of the order by us. These technical risks may seriously affect the execution of your order. More specifically, your order may not be executed according to your instructions or at all. WISUNOFX assumes no liability in the above case.

9. Cyber Risk

There are risks associated with your transactions through the Client Terminal, such as hardware and software failures, malfunctions or misuse, or poor internet connectivity, interruptions, transmission failures, or public grid

failures or hacking, overloaded connections, or incorrect client setup, or the Client's failure to comply with applicable rules as described on the WISUNOFX website. You are responsible for the risk of financial loss arising from the circumstances described above.

10. Execution of trading risks on holidays or weekends

When you will be able to trade will be limited. For example, you will not be able to trade on weekends and bank holidays (opening and closing times can be found on our website) as financial markets often close trading. You should be aware that this can result in significantly different prices when the market opens and when the market closes. You won't be able to place or change your order on weekends, market holidays, or other times when the market is generally closed.

11. Suspension of Trading

Under certain trading conditions, you may be restricted when trading and it may be difficult or impossible for you to close your position. This is likely to happen, for example, when the market price changes rapidly, and if the price rises or falls significantly within a trading day, trading will be suspended or restricted according to the regulations of the relevant exchange. Setting a stop loss does not necessarily limit your loss to the planned amount, as market conditions make it impossible to trade at the agreed price. In addition, under certain market conditions, the execution price of the stop loss order may be lower than the price set by the customer, and the actual loss may be greater than expected.

12. Foreign Exchange Market

The foreign exchange market involves a variety of risks. If requested, WISUNOFX must provide an explanation of the risks involved and protective measures, if any, including the extent to which it will accept any liability for breach of contract by the foreign company through which it operates. Potential gains or losses on foreign exchange market transactions or contracts denominated in foreign currencies will be affected by exchange rate fluctuations.
